

## Dry and wet vacuum cleaners: single motor.

Strong suction – wet or dry. Thanks to their robust design they are reliable in continuous daily use and their compact size makes them easy to transport:

Thus columbus compact-class dry and wet vacuum cleaners are suitable for all kinds of cleaning tasks where smaller areas are concerned.

Four castors ensure safe positioning and easy manoeuvrability; the suction motors are as efficient as they are reliable, ensuring excellent clean results.

The SW 30 is available with either a plastic or stainless steel housing.

## Cleaning on the move: the high suction compact class.

The compact class is supplied with an extensive range of accessories for wet and dry cleaning – included as standard with all models.

In addition, a wide spectrum of extras is available to be able to adapt flexibly to the most diverse requirements. Thus, for example, different suction hoses are available to increase the radius of action.

## Dry and wet vacuum cleaners: multi-motor.

The dry and wet cleaner SW 52 with two suction motors, and SW 53 with three motors, are genuine professionals when it comes to cleaning medium-sized and large areas.

Available with either plastic or stainless steel housings, both models can clean up large amounts of dirt or liquid thoroughly and quickly, thanks to the large capacity of their tanks. Emptying the tanks is just as fast, using the tilting chassis or the drain hose. For an impressive suction result with different suction lengths, the motors can be switched on individually. A float protects the motors reliably against humidity during wet operation. The robust chassis and large rear wheels ensure safe positioning when standing and optimal manoeuvrability.

## Clean design: the professional class for the toughest tasks.

In addition to the standard accessories columbus offers an extensive range of professional extras for special tasks:

For example, a professional vacuum set with durable one-piece suction tube made of aluminium and height adjustable metal squeegee tool for optimal adaptation to the floor conditions as well as fatigue-free working during the toughest cleaning tasks.

To increase the cleaning radius suction hoses are available up to 15 m in length. With the fixed floor tool, large areas can be cleaned efficiently – either wet or dry.
